

## Use our genomic reports to create your DNA-precise health plan.

### A GUIDE TO PARTNERING WITH YOUR CLINICIAN IN THE INTELLXXDNA HEALING PROCESS

Are you and/or a loved one struggling to find more concrete answers to health and wellness issues? Our reports are a foundation for planning your personalized approach toward optimal cognition, health, vitality and mental wellness.

Your clinician can use an IntellxxDNA genomic test to provide comprehensive, clinically-focused knowledge of health risks and benefits within your personal genetic make-up, and use our recommendations to optimize your health and connect the dots that lead to your best self.

**WHAT DO THE REPORTS REVEAL?** IntellxxDNA reports provide unprecedented insight into your unique genetic make-up to assist your clinician in developing true, personalized care.

**HOW?** Your DNA contains variants, or SNPs (single nucleotide polymorphisms), that can effect how you make and transport important vitamins, hormones, minerals and things that contribute to inflammation and repair. Our reports help identify the interplay between these variants and how they can affect your health. We include evidence-based, well-researched potential intervention strategies – environment, lifestyle, nutrition, supplements and medications – that will serve as a basis of discussion between you and your clinician.

Gain molecular-level insight into your state of well-being

Learn how to support your body using personalized nutrition, vitamins and supplements, as well as lifestyle changes to reduce the need for medications

Reduce anxiety, time and resources by using state-of-the-art advanced genomic technology to pinpoint treatments

Feel confident in your health care plan, as it's being precision-designed specifically for you

## How does the testing process work?

IntellxxDNA clinical genomic tests are available for healthcare providers who hold an MD, DO, FNP, PA, or ND license within their practicing state within the continental United States. These tests are ideal for functional and integrative medicine practitioners.

### CONDUCTING AN INTELLXXDNA GENOMICS TEST

1. Your clinician initiates the process by signing up to receive a demo of our clinical decision support tool. Signing up can be done instantly here: [IntellxxDNA.com/demo](https://IntellxxDNA.com/demo)
2. Your clinician will order your test kit and provide you with login credentials to your online portal.
3. When your test kit arrives in the mail, log into your portal to activate your kit barcode, and follow the instructions in the kit to collect a sample of your saliva.
4. Mail your kit (postage-free in the USA). We'll send you an email as soon as your results are available.
5. Schedule an appointment with your clinician to discuss your results and begin the process of creating a personalized health plan based on the real you!

“IntellxxDNA genomic testing is the single most valuable test I have ever ordered. It gives me the precision needed to prevent and reverse disease.” — Dr. Robert Sheeler

Former Clinical Practice Chair for the Department of Family Medicine at the Mayo Clinic and professor at the Mayo Medical School. Board-Certified in both Family Medicine and Integrative Medicine and certified in Functional Medicine.
